Introduction

Eplan offers Engineering software and service in the fields of electrical engineering, fluid power, automatization and mechatronics. The company develops one of the world's leading software solutions for engineering, plant engineering and enclosure design. Eplan is also the ideal partner for simplifying challenging engineering processes.

Standardized and individual ERP and PLM/PDM interfaces ensure consistent data along the entire value chain. Whether small or large companies, customers can thus use their expertise more efficiently. Eplan aims to keep growing with its customers and partners and furthers integration and automation in engineering. "Efficient Engineering" is our motto.

Eplan was founded in 1984 and is part of the Friedhelm Loh Group.

All from one provider: Eplan Solutions

Eplan supports the user in setting up engineering across multiple disciplines and independent of location. This means increases in efficiency when working on the Eplan project, because digital data flows seamlessly from solution to solution and is enriched accordingly in the project. Eplan Platform offers added value for collaboration in a team, especially when it comes to tasks shared between different locations.

Eplan allows bidirectional exchange with ERP and PLM / PDM systems via interfaces. Through neutral interfaces the Eplan project data can be exchanged with other software environments and further processed.

Extensions for all cases

No matter which requirements have to be fulfilled in the future or to what extent work with Eplan solutions is already taking place: Extensions in all directions can be implemented easily thanks to the Eplan concept – flexibly and individually for individual tasks.

A comprehensive overview of the current extension options is listed in the licensing overview. Should you have any further questions on this topic, please do not hesitate to ask your Eplan contact person.

Eplan View

Eplan View is a simplified license variant that allows users to view, but not edit, projects created with Eplan Preplanning, Eplan Electric P8 and Eplan Pro Panel.

Eplan View serves to display Eplan projects / schematics without editing rights and is intended, for example, for people who need to understand and verify schematics but should not make modifications.

Scope of service and requirements:

- Opening and searching of Eplan projects
- No editing or commenting possible
- Local installation required

Hardware and software requirements for Eplan

Please observe the notes in the information portal ([Software and hardware requirements](#)). These requirements are only available in English.

Note on licensing

Eplan View is provided in two license forms:

Eplan View single license

The single-user license allows the software to be installed on a computer of a company. Usage in a network environment and operation via Remote Desktop in a Terminal Server environment is technically possible. The simultaneous, parallel usage of the software by several users or the parallel operation on several computers is excluded in the case of a single-user license by the license agreement.

Eplan View general license

The general license allows multiple installation on several computers and the parallel operation of the software. Use in a network environment and operation via Remote Desktop in a Terminal Server environment is supported by the software and is protected by the license agreement.
